## Hinged Base Plates

A hinged base plate consists of:

- Upper assembly:  
Steel tube welded to a mounting plate with oblong holes.
- Bottom assembly:  
Ground plate, hinge pin and anchor bolts with nuts and washers.

Tubes and plates are made in steel 37. The anchor bolts are steel type 6.8. All parts, including nuts, washers and anchor bolts are galvanised.

The steel tube on the base's upper assembly is bonded into the butt of the flagpole during manufacture.

The bottom assembly is delivered assembled and must be embedded into a concrete foundation (see instructions).

For urgent flagpole requirements the bottom assembly is available already embedded in a concrete foundation.

Item	Flagpole Height m	A Width mm	B Length mm	C Across mm	D Along mm	E Length mm	F Anchor bolts mm	Type
Hinged base	4 - 8 m	180	180	140	150	30	16 x 405	1
Hinged base	9 - 12 m	230	230	170	170	49	20 x 570	1
Hinged base	13 - 18 m	250	250	190	175	49	24 x 860	2

Measurements C and D are from hole centre to hole centre.

## Wall Mounting Bracket

A standard wall bracket for a vertical position consists of:

- Two sets of angle brackets fixed to the facing.
- Four quarter straps.
- Two half straps.

The brackets are mounted at intervals of 100 - 150cm. To avoid damage to the fibreglass flagpole the straps must not be over-tightened.

If the flagpole is to be mounted in an angled position from the facing the upper angle bracket is 2 pieces of flat steel which are moveable. An angle of 20-45° appears. There ought to be 100-150cm between the angle brackets.

The wall brackets are fixed to the facing by means of screws and rawplugs.

Item	Flagpole Height m	A Diameter mm
Stand. wall bracket	3	65 - 70
Stand. wall bracket	4	78 - 83
Stand. wall bracket	5	82 - 87
Stand. wall bracket	6	85 - 90
